PROFESSIONAL SUMMARY

Senior Fullstack Engineer with 4+ years of experience architecting and delivering scalable web platforms across startup and enterprise environments. Specialized in TypeScript, Vue.js/Nuxt, PHP (Laravel/Symfony), and React, with deep command of SOLID principles, Clean Architecture, Domain-Driven Design (DDD), and Test-Driven Development (TDD). Proven track record shipping high-performance frontend experiences and robust REST/GraphQL APIs at enterprise scale, including the Stellantis automotive platform (Xcode Tracker & PMTWeb). Experienced Tech Lead: code reviews, technical documentation, and cross-functional Agile delivery. Bilingual in French (C1) and English (B2).

TECHNICAL SKILLS

Frontend: TypeScript, Vue.js, Nuxt.js, React.js, Next.js 14, HTML5, CSS3, Tailwind CSS, WebSockets, Real-time UI

Backend: PHP 8, Laravel (Expert), Symfony 6, NestJS, Node.js, FastAPI, Go, REST API, GraphQL, MQTT, RabbitMQ

Architecture & Patterns: SOLID, Clean Architecture, DDD, Hexagonal Architecture, CQRS, Microservices, Event Sourcing, TDD, PSR Standards

Databases: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, SQL Indexing & Query Optimization

Cloud & DevOps: AWS (EC2, S3, RDS), Docker, CI/CD Pipelines, GitHub Actions, Git, Linux, LDAP Auth

Testing: PHPUnit, Jest, TDD, Unit & Integration Testing, Mocking, Automated Test Coverage, Code Review

AI / Integrations: OpenAI / LLM Integration, Stripe API, Automated Data Classification

PROFESSIONAL EXPERIENCE

Fullstack Lead Developer & Tech Lead · Segula Technologies — Client: Stellantis

February 2024 – Present | Tunis, Tunisia

Key Products: Xcode Tracker · PMTWeb

- Architected and led** the Xcode Tracker platform — a Laravel + React ecosystem processing 500+ daily requests on a PostgreSQL backend — establishing team-wide design patterns and enforcing Clean Architecture across the entire codebase.
- Eliminated** critical KPI calculation bottlenecks through deep SQL indexing and REST API layer optimization, delivering a **40% reduction in computation time** and significantly improving dashboard responsiveness for Stellantis operations teams.
- Engineered** an OpenAI/LLM pipeline for automated fault classification within the PMTWeb platform, cutting diagnostic processing time by **30%** and reducing manual triage workload for engineering teams.
- Implemented** end-to-end CI/CD pipelines and secure LDAP authentication, achieving **95% platform uptime** and standardizing zero-downtime deployments across environments.
- Led** a team of 3 developers — conducting structured code reviews, authoring technical documentation, and providing architectural mentorship to maintain high engineering standards.

Senior Fullstack Engineer · AUVA-X (Startup)

January 2023 – Present | Remote

- Architected** a high-performance real-time dashboard from scratch using React, NestJS, and WebSockets — enforcing team design patterns and Clean Architecture for a maintainable, horizontally scalable system.

- **Integrated** an AI/LLM pipeline (OpenAI) for automated data classification, improving processing speed by **40%** and eliminating manual processing overhead at scale.
- **Owned** full AWS cloud infrastructure (EC2, S3, RDS), designing automated CI/CD pipelines and Docker orchestration for reproducible, zero-downtime continuous delivery.
- **Optimized** complex PostgreSQL queries, reducing API response latency by **30%** and directly improving end-user experience across the platform.

Senior Fullstack Developer · Sandlist

August 2023 – December 2023 | La Marsa, Tunisia

- **Built** a high-traffic marketplace platform using Laravel and Next.js, architected to handle 10,000+ active listings with optimized query performance and a scalable data layer.
- **Engineered** a real-time messaging system via WebSockets within an event-driven architecture, enabling instant buyer-seller communication and improving platform engagement.

Fullstack Developer · Tech Solutions / Stellantis Project

June 2021 – December 2022 | Tunis, Tunisia

- **Delivered** enterprise-grade features for the Stellantis automotive platform using Laravel (PHP 8) and React, operating within a high-performance Agile squad and maintaining strict code quality standards across a Microservices architecture.
- **Engineered** secure payment integrations via the Stripe API including automated refund management workflows, adhering to PCI-DSS best practices across high-volume transactional operations.
- **Collaborated** with UX/UI designers on component architecture and style systems for a large-scale Microservices frontend, ensuring design-to-code fidelity and long-term maintainability.

Fullstack Developer · Premier Consulting

August 2022 – October 2022 | Manouba, Tunisia

- **Developed** a secure audit management solution using Symfony 6, deployed across 10+ enterprise clients, applying Clean Code principles and structured API design for maintainability.
- **Reduced** development cycle time by **15%** through clean API design patterns and structured technical documentation, accelerating onboarding and feature delivery.

Fullstack Developer Intern · Andromedia (Stage)

April 2021 – July 2021 | Hammam-Lif, Tunisia

- **Built** a full-featured e-commerce platform on Laravel 7, integrating the Stripe API for end-to-end payment automation — from product catalog to checkout and order management.

KEY PROJECTS

Xcode Tracker — Enterprise Automotive Platform (Segula / Stellantis) Feb 2024 – Present

- Laravel + React + PostgreSQL platform managing 500+ daily KPI requests for Stellantis operations, featuring LDAP authentication, CI/CD pipelines, and OpenAI-powered fault classification (–30% diagnostic time, –40% KPI computation time).

PMTWeb — Maintenance & Fault Management Platform (Segula / Stellantis) Feb 2024 – Present

- Enterprise maintenance tracking web application built for Stellantis, integrating AI-driven automated fault classification and real-time reporting dashboards — co-led with a 3-developer team under Tech Lead ownership.

QR-Resto — SaaS Restaurant Platform (Personal Project) 2023 – Present

- End-to-end SaaS platform for real-time restaurant ordering and menu tracking, built with Next.js 14, FastAPI, and WebSockets. Sole owner of architecture, automated test coverage, and production deployment — engineered for high-traffic concurrency.

API Gateway (Go) — High-Performance Microservice (Personal Project) 2024

- Production-grade reverse proxy microservice in Go with rate-limiting, centralized logging, and intelligent request routing — demonstrating edge infrastructure expertise and event-driven systems design.

EDUCATION

Software Engineering Degree *(In Progress)*

iTeam University, Tunisia · 2025 – Present

Bachelor's Degree in Computer Science

ISI El Kef, Tunisia · 2017 – 2021

LANGUAGES & CERTIFICATIONS

Languages: Arabic (Native) · French — C1 Fluent · English — B2 Professional

Certifications: Responsive Web Design — freeCodeCamp · Advanced React & Laravel Architecture
